

以下 Caller 相关隐私条款，请开发者：

- 添加隐私条款内容到产品官网（GP 商品页中所填的网站）
- 添加隐私条款内容到合入应用的现有隐私条款中。

Below is the Du Caller privacy policy, please:

- **Add the privacy policy content into your app website. (The website registered on Google Play app page)**
- **Add the privacy policy content into your current app privacy policy.**

Privacy Policy For Caller ID & Call Block Function

1. Installation and Use

When you use the Caller ID and Call Block function, we will collect, process and retain personal information from You and any devices You may use in Your interaction with our Services. This information may include the following: phone number, geo-location, Your IP address, device ID or unique identifier, device manufacturer and type, device and hardware settings, ID for advertising, ads data, operating system, operator, IMSI, connection information, usage statistics, device log and event information, *the number of incoming & outgoing calls* and other information based on your interaction with our Services.

The information mentioned above may be used to provide smart caller ID, among other features, allow for population of unidentified numbers and other data in call, display the name associated with a certain number for incoming or outgoing calls or following a manual number search against our Caller database.

2. Contacts Information

Please note: the app will never upload and store your contacts and your call history.

The app accesses the contacts on the phone in order to display the contacts and so the app can record or ignore calls from specific contacts. While we are intensity focused on protecting you from unknown calls, we are just as concerned with making sure important calls are not missed. Access to contacts helps us filter out numbers that may look spam, but are actually legitimate (like your Doctor's office). We also access contacts to identity callers under the name you prefer to see, to enable your ability to add numbers to your blocklist.

3. Numbers tagging

You can tag an unknown number after making a call. So this contribution will make our database better. We may also associate a name with a phone number through the numbers tagging functionality, which allows a user who receives a call from a phone number which is

not associated with a name in the database to indicate a name to be associated with that number. A name will only be associated with a number through this functionality if a sufficient number of independent Users, based on our algorithm, have indicated the same name for the relevant number.

4. Call Block

Call Blocking requires to access your contacts. Therefore, the app is able to block the numbers that users refuse to answer. Meanwhile, the app can also block numbers from user' s contacts.

If you have any questions about the information we collect or how it is used, please contact us at raphaelqinn@gmail.com
